

Quickbridge® 10250 BeamX Series

Product Snapshot

The QuickBridge® 10250 BeamX solution speeds the deployment of point to point networks by eliminating the complicated and time-consuming antenna alignment process.

- Beam steering antenna for optimum performance and simple setup
- Point to Point link that delivers up to 866 Mbps data throughput and covers distances up to 10 miles (16 km)
- Service flow based QoS with deep packet inspection.
- AES 128 bit encryption with 256 bit upgrade option
- 20, 40, and 80 MHz channels

BeamX™ Antenna

The BeamX™ antenna utilizes a 17° beam that electronically steers itself to the remote client. The beam operates within a 60° sector. This improves the radio Signal to Noise Ratio (SNR), enables higher modulations, and improves throughput. BeamX also speeds up deployment by removing the antenna alignment phase. Roughly aim at the remote end, and the BeamX technology does the fine-tuning and SNR optimizing automatically.

Powered by WORP®

Proxim WORP enables the most efficient wireless broadband access possible in a packet-based network. Advanced QoS controls, committed interface rates, latency controls, IGMP snooping, and native multicast support allow granular service level management and the best video performance available.

Proxim SmartScan™

Performs background analysis of the entire RF spectrum and creates channel availability tables to allow an immediate switch to a free channel in case of weather radar detection or interference. SmartScan makes the DFS channel more efficient by removing the initial transmission delay. It also opens access to the 5.600–5.650 GHz sub-band and enables effective use of up to 355 MHz of DFS spectrum.

Advanced nLOS Managment

In urban nLOS conditions, BeamX QB can help find the right reflection angle from a nearby wall or building to facilitate connectivity.

The always-on BeamX intelligence ensures the link remains optimized to take full advantage of the systems high throughput capability.

Rugged Reliability

IP67 rated metal enclosure to ensure years of reliable service in harsh environments, including high winds, high salt, and temperature extremes.
